Python | Core Sales Force | Core Java Programming | Angular | SQL | Firebase | Git | MsOffice

Projects

Online Electronic Goods Shopping Portal

- *Online Shopping enables consumers to purchase goods or services directly from internet sellers via web browsers. Shoppers find products by visiting retailer websites or using shopping search engines, making purchases on various devices.*
- *An online electronic goods shopping portal is a web-based platform designed to facilitate the buying and selling of electronic products over the internet. This project involves creating a comprehensive e-commerce website specifically tailored to the electronic goods industry.*
- Tech Stack used – **PHP, MySQL, HTML, CSS**

Web Library

- *The 'WEB LIBRARY' project aims to offer convenient access to a library portal through a web interface, enabling admin to access and manage books. It allows users to read and download books in the library. This project simplifies book discovery, making it valuable for those seeking information about the Web Library.*
- *A web library for reading and downloading books is a digital platform designed to provide users with access to a diverse collection of books across various genres, including storybooks, educational materials, novels, articles, and more. The project aims to create a user-friendly and accessible environment for book enthusiasts to explore, read, and download content.*
- Tech Stack used – **Express.js, Angular, SQL**
